

INVITATION

Dear Colleagues,

TURKISH ASSOCIATION FOR PSYCHOPHARMACOLOGY's **7th International Congress on Psychopharmacology & 3rd International Symposium on Child and Adolescent Psychopharmacology (7th ICP - 3rd ISCAP)** will be held on April 15-19, 2015 in Antalya, Turkey. During this five-day congress; distinguished local and international speakers will provide up-to-date information and cutting edge psychopharmacology along with interactively sharing the latest trends in treatment resistant cases and will offer practical solutions to contemporary challenges clinicians face, and also review the latest developments in biological psychiatry, neuroscience, and psychiatric neuroimaging. Additionally, we aim to contribute to the integrative approach in psychiatric treatments by including presentations and discussions about non-pharmacological psychiatric treatments and their administration standards and guidelines.

Like our previous congresses, distinguished speakers will share the latest developments in the field through conferences, panels, pair/combined debates, and satellite symposiums. Workshops, meetings with experts, and certification courses will be organized for interested participants. The abstracts of presentations will be published in the specific supplementary issue of **Bulletin of Clinical Psychopharmacology**, which is indexed in SCI-E. The first three posters chosen by the poster jury will be awarded with the '**TAP Outstanding Research Awards**'.

We would like to invite you to take part in the **7th ICP - 3rd ISCAP** congress. While benefiting from the stimulating scientific sessions at the congress, you may want to take some time to relax and discover all that historical and post-modern Antalya has to offer with brilliant Anatolian cuisine, flamboyant culture, and wonderful sunny weather.

Warmest regards,

7th ICP - 3rd ISCAP Organizing Committee
